DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
- Claims 1-8 drawn to conducting secure transactions over a network, classified in class 705 subclass 53.
- II. Claims 10-17, drawn to computer input/output systems, classified in class 710.

The examiner notes that in the original document claim 11 was omitted and subsequent claims were renumbered as appropriate.

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a diskette drive is not necessary to transfer data securely between computers. The subcombination has separate utility such as storing computer data.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
